

The Rebellion Access Granted

EDF Intelligence: File 20874/B
The Rebellion Outline

Base: Carbon
Respiration: Class M Earth-like air
Status: Enemy

TOP SECRET

There exists little intelligence of our enemy.

However, we do know that they refer to themselves as The Rebellion and that they represent a group formed by a political schism of their species. Why they broke away like this, we do not know. From intel gathered from wrecked enemy ships, we have learned details of their plan to invade and colonize Earth.

They plan to exterminate the entire human race by simultaneously detonating biological weapons on various points of the Earth's surface. Whether these weapons will work on children is unknown. The points of detonation are also unknown. But the co-ordinations for a physical invasion of the aliens has been learned. A triangular area in the vicinity of Bermuda.

Our myths of disappearances in this area can now be understood as alien disturbances in the electromagnetic spectrum there effecting instrumentation. In other words, they were trying to mask our radar, communications and more, from that area to hide their arrival. Abductions have also been reported in that area.

As for The Rebellion's military capacity, we can only estimate from past skirmishes. We do not know if they are involved in any other military campaigns elsewhere. But their warning of a return must be considered to be a threat of massively increased force.

Of this return, it is estimated there will be 100 Rebellion ships to every Orb.

We have possession of intercepted messages and texts which have yet to be decoded. There are also pieces of crashed spacecraft in the area of the UK city of Chester that have not yet been located. We therefore have a chance to learn more about them before they return. Lets gather intelligence and find a way to beat these monsters.
